Seeking an AI Internship

CAREER OBJECTIVE

Electrical Engineering student at Alexandria University (Communications & Electronics) building toward a career in AI, Generative AI, and Agentic AI systems, backed by a strong mathematical foundation in Linear Algebra, Probability & Statistics, and Calculus. Hands-on experience designing and shipping Retrieval-Augmented Generation (RAG) pipelines, LLM-powered applications, and agentic AI workflows using Python, LangChain-style tooling, FAISS/BM25, and Groq/Hugging Face APIs, currently deepened through a 6-month Agentic AI & Generative AI System Developer internship. Complemented by NVIDIA-certified training in deep learning and LLMs, and practical exposure to computer vision and classical ML. Actively seeking an AI/Generative AI internship to further apply and grow this expertise.

EDUCATION

Bachelor of Electrical Engineering — Communications & Electronics

Alexandria, Egypt

Alexandria University | Expected Graduation: 2027

Relevant Coursework: Linear Algebra, Probability & Statistics, Calculus, Digital Signal Processing, Data Structures & Algorithms, C Programming

High School Diploma — New Sedi-Gaber Language School

Grade: 92.3% | Ranked 2nd in class

WORK EXPERIENCE

Trainee, Agentic AI & Generative AI System Developer — DEPI

Jul 2026 – Present

6-month program | Hybrid | Currently in progress

- Undergoing structured training across the full agentic/generative AI stack: Transformers & LLM deep dive, LLM architecture/behavior/debugging, advanced prompting, Hugging Face and open LLMs, RAG & memory systems, and multi-agent systems.
- Building AI apps & UI development skills alongside deployment & monitoring practices, working toward a hands-on capstone project.

LLM Program Trainee — Tips Hindawi (Edrak for AI)

Jun 2026 – Jul 2026

Remote

- Completed a hands-on internship covering LLM fundamentals, prompt engineering, RAG & embeddings, and building AI-powered apps such as chatbots and assistants.
- Delivered a full RAG-based capstone project (Document Intelligence System) as the official challenge submission — see Projects.

Machine Learning Trainee — National Telecommunication Institute (NTI)

Jul 2025

- Trained extensively in ML fundamentals: data preprocessing, exploratory data analysis, feature engineering, and supervised model building and evaluation using Python, Pandas, NumPy, and Scikit-learn.
- Gained practical experience constructing end-to-end ML pipelines from raw data ingestion through model selection and performance evaluation.

Front-End Developer Intern — National Telecommunication Institute (NTI)

Aug 2025 – Sep 2025

- Built responsive UIs using HTML, CSS, JavaScript, and Bootstrap; applied Git for version control and clean code practices.

Customer Service Agent (Part-Time) — VOIS

- Provided high-quality support to UK-based clients; developed advanced English proficiency and strong professional communication skills.

HACKATHONS

AI Hackathon — Orange Digital Center × ITIDA × TIEC × Creativa × Instant

Aug 2026

5-day hackathon

- Built a safe, evidence-grounded medical guideline RAG system (Medical Guideline Q&A) under a strict evaluation rubric covering retrieval quality, grounding/citation accuracy, and safety — see Projects.

PROJECTS

Medical Guideline Q&A — Hybrid RAG for Clinical Decision Support [GitHub](#)

- Built a hybrid-retrieval RAG system that answers clinical questions strictly from uploaded medical guideline PDFs, combining FAISS (PubMedBERT embeddings) and BM25 fused via Reciprocal Rank Fusion.
- Implemented a confidence gate that refuses to answer before any LLM call when retrieval evidence is weak, and grounded generation (Groq gpt-oss-120b) with numbered citations mapped to verified document/page/section metadata.
- Built automated evaluation (Citation Accuracy, Precision@k, Faithfulness) and a Streamlit UI for interactive PDF upload and Q&A.

Document Intelligence System — Multi-Format RAG Q&A App [GitHub](#)

- Developed a full RAG pipeline supporting multi-format uploads (PDF/DOCX/TXT) with column-aware PDF extraction, local embeddings (MiniLM), and FAISS vector search.
- Added dynamic retrieval sizing and context expansion around strong matches, with grounded answer generation (Llama 3.3 70B via Groq) and full source citations.
- Deployed as a free, publicly accessible Streamlit web app as the official capstone submission for the Tips Hindawi Challenge (Jun–Jul 2026).

DriverGuard — Real-Time Driver Safety System [GitHub](#)

- Implemented real-time eye closure detection and head pose analysis using probability thresholds and time-based logic via Google ML Kit and Canvas APIs.
- Applied computer vision inference pipelines on a live camera feed with sub-second response; integrated audio alerts and visual overlays for drowsiness and distraction detection.
- Demonstrated applied understanding of real-time inference, classification thresholds, and sensor data modeling — core skills transferable to deep learning deployment.

Movie Recommender System

- Built a content-based filtering recommendation engine processing 5,000+ records; applied cosine similarity and feature vectorization to rank and deliver personalized suggestions.
- Performed full data preprocessing pipeline: data cleaning, normalization, encoding, and dimensionality-aware feature selection using Pandas and Scikit-learn.

TECHNICAL SKILLS

AI & Machine Learning: Generative AI, Agentic AI & Multi-Agent Systems, RAG, LLM Applications, Prompt Engineering, Supervised & Unsupervised Learning, Deep Learning, Computer Vision, NLP Fundamentals

GenAI Tooling: LangChain-style pipelines, FAISS, BM25, Vector Databases, Hugging Face, Groq API, Streamlit

Data Science Libraries: NumPy, Pandas, Scikit-learn, Matplotlib

Programming Languages: Python (Primary), C/C++

Tools & DevOps: Git, GitHub, GitHub Actions

Web & Mobile: HTML, CSS, Bootstrap, Android SDK, Android Studio

CERTIFICATIONS

- NVIDIA DLI — Generative AI: Fundamentals | ITI (35 hrs) [Python, GenAI, Prompt Engineering, RAG, LLM Applications]
- Getting Started with Deep Learning — NVIDIA
- Python for Data Science — Maharah-Tech

VOLUNTEERING & ACTIVITIES

Class Representative — Faculty of Engineering, Alexandria University

- Acted as liaison between students and faculty; coordinated academic concerns and student-related matters.

Event Organizer & Volunteer — Faculty of Engineering Activities

- Co-organized Graduation Ceremony (2023) for 500+ students; supported Orphans' Day (2024, 2023) and Ramadan Iftar (2023, 2022) with 100+ participants.
- PR Member — The Chairman, SMU (2023) | Training Staff — Mind Juniors, SMU (2023) | Delegate — MAU, Bibliotheca Alexandrina (2019)

LANGUAGES

Arabic: Mother Tongue | English: Advanced Proficiency
